PROFILE

Solo full-stack developer and Computer Science student building production-grade PHP/MySQL applications end to end — from database schema and REST APIs to offline-first PWAs and payment-integrated e-commerce flows. Comfortable owning a project from architecture through deployment, with hands-on experience solving real hosting, security, and infrastructure issues. Seeking freelance and entry-level development opportunities.

TECHNICAL SKILLS

- **Languages & Core:** PHP, JavaScript, TypeScript, SQL, Java, HTML5, CSS3
- **Backend & Data:** MySQL, REST API design, JWT authentication, PHPMailer, phpMyAdmin, offline-first sync architecture
- **Frontend:** Responsive UI development, Chart.js dashboards, Progressive Web Apps (PWA), Capacitor (mobile app packaging)
- **Tools & Workflow:** Git, SSH, AI-assisted development (Claude, Kiro IDE / Spec mode), MCP concepts, XAMPP, InfinityFree/GoogieHost deployment, Brevo API
- **Payments & Local Compliance:** GCash/Maya payment proof workflows, BIR-compliant VAT handling, Senior Citizen/PWD discount logic, Philippine address/postal systems

FEATURED PROJECTS

Xiron (formerly Iron Log) — Offline-first fitness tracking PWA (xiron.cu.ma)

- Built a full offline-first Progressive Web App with a custom sync engine, allowing workout logging without an internet connection and reliable conflict resolution on reconnect.
- Designed and implemented the PHP/MySQL REST API from scratch: registration, email verification, JWT-based login/session handling, and the offline sync endpoints.
- Integrated Google Sign-In alongside native authentication, and built an onboarding wizard, multi-program workout support, and progressive overload logic.
- Configured a Capacitor build (package ID com.xeddy.ironlog) to package the PWA for future app store submission.
- Diagnosed and resolved a hosting-level bot-protection issue blocking AJAX requests by migrating providers, then fixed a follow-on proxy conflict; switched outbound email from SMTP to Brevo's HTTPS API after the new host's firewall blocked SMTP traffic.

Coffee Chapters — Full-stack coffee shop ordering & admin system (coffeechapters.fredev.app)

- Developed a complete PHP/MySQL/JavaScript ordering platform including cart, checkout, and order tracking.
- Implemented GCash/Maya payment-proof upload flow, BIR-compliant VAT-inclusive pricing with correct tax extraction, and Senior Citizen/PWD discount logic (20% discount plus VAT exemption).
- Built automated PHPMailer email receipts plus an in-app receipt modal, and an admin dashboard using Chart.js (donut, bar, and line charts, KPI cards, top products, recent orders).
- Created a Philippine cascading address selector (NCR and nearby provinces with postal code auto-fill) used in both checkout and user profile.
- Added a contact form with an admin inbox panel and a public About Us page.

WORK EXPERIENCE

Crew Member — McDonald's — CGBI (franchise)

- Delivered fast, accurate customer service in a high-volume, deadline-driven environment, following strict food safety and quality procedures.
- Worked as part of a coordinated shift team, adapting quickly to peak-hour pressure and shifting priorities.

Work Immersion Trainee — Cruz-Rabe Maternity & General Hospital (CRMGH)

- Completed a structured work immersion program, gaining exposure to hospital administrative and operational workflows.
- Practiced professionalism, confidentiality, and attention to detail in a real healthcare institution setting.

SPES Program Participant — Public Employment Service Office (PESO) — Taguig

- Participated in the Special Program for Employment of Students (SPES), a government initiative providing students with paid work experience.
- Gained early exposure to office/administrative processes and public-sector work culture.

EDUCATION

Bachelor of Science in Computer Science

University of Makati • Expected Graduation: 2029

FREELANCE & AVAILABILITY

- Available for freelance web development engagements (PHP/MySQL/JS/TypeScript full-stack builds) via Fiverr, Upwork, and OnlineJobs.ph.
- Comfortable working solo end-to-end: requirements, database design, backend API, frontend build, deployment, and post-launch fixes.
